

# CAEP 2013 Annual Conference Keynote Speakers

**Sunday, June 2, 2013 • 08:45 - 09:30 AM**

## **Why Hospitals Should Fly: The Ultimate Flight Plan to Patient Safety & Quality Care**

**Speaker: Mr. John Nance**

North American medicine is a physician-centric, cottage industry, and such a "system" is generically unable to rise to the levels of performance, efficiency, safety, and financial stability necessary to serve the population. Basically, the entire model of American and Canadian medicine works actively against the very serum that is always needed to protect patients: Information. It is impossible to overstate the urgency of change in North American health-care, and the best guidance comes from other human enterprises that have taken high-risk and turned it into high-reliability. This lecture examines why the main assets of safety for other industries, and especially the airlines, are so important to medical practice.

**Monday, June 3, 2013 • 08:45 - 09:30 AM**

## **Back to the Future to the Past and Back Again to the Past Future's Past**

**Speaker: Dr. Dave Hepburn**

A unique glimpse into the future of medicine with a real life visit to medicine 10,000 years ago. Today we are balanced precariously on the heady cusp of the third great revolution in medicine, the exciting biomolecular revolution. The biointelligence age, marked by the rapid and complex intersection of technologies is also intersecting with a world where practices 10,000 years old are still in full swing. Taking a medical leadership role on a populated yet remote and primitive South Pacific island is easy...when you're the only doctor. It's also incredibly fun, challenging and fulfilling.

**Wednesday, June 5, 2013 • 12:00 – 12:45 PM**

## **An ER Doc's Practical Guide to Vision**

**Speaker: Dr. Ian Rigby**

Do you feel your career lacks meaning? Struggling with work-life balance? Looking to achieve more, but not sure what? Or perhaps you are challenged with too many opportunities. This session will provide participants with a focused and practical experience in defining their own vision and seeing how this can address these and other challenging issues.

### **Learning Objectives**

- Understand the benefits of defining one's vision
- Understand the component parts of vision
- Experience a focused process of defining one's own vision
- Be able to undertake an in-depth exploration their own vision with provided materials
